

NKS SUPPORT FOR OPUS IS NOW AVAILABLE

Our award-winning collection of virtual instruments powered by the revolutionary Opus software are now fully compatible with NKS! This includes the ability to browse instruments, preview sounds, and access pre-mapped instrument parameters, all within Native Instruments' Complete Kontrol and Maschine hardware and software.

PLEASE NOTE: Running the 'NKS Support for Opus' installer will de-install the 'NKS Support for Play 6' installation. NKS Support is not available for Opus and Play 6 at the same time.

STEP 1: DOWNLOAD THE 'NKS SUPPORT FOR OPUS' INSTALLER

Click [here](#) to visit the Updates page of our Support Center, where you can download the 'NKS Support for Opus' installer for Mac and Windows operating systems.

STEP 2: RUN THE INSTALLER

After closing all programs, run the 'NKS Support for Opus' installer and proceed through the prompts to complete the installation.

STEP 3: COMPLETE THE 'LIBRARY UPDATE' PROCESS

Launch Native Instruments' Complete Kontrol or Maschine software to automatically begin the **LIBRARY UPDATE PROCESS** that appears as a circular progress wheel in the Library tab. This scan will import newly installed EastWest Libraries in Opus, making them NKS-ready for use with Native Instruments' Complete Kontrol and Maschine software and hardware.

Click on the 'All Instruments' header, then click the **VENDOR FILTER** to find EastWest in the list. Next, click on the product icon to view its instruments, click once to playback an audio preview, and click twice to load the instrument.

PLEASE NOTE: This process will add NKS Support for all EastWest Libraries currently installed in Opus. To add support to EastWest Libraries added since last running this installer, simply run the 'NKS Support for Opus' installer again and launch NI software (repeat steps 2 and 3).
